California Chassis Expands Contract Manufacturing and Engineering Services

Expansion includes new facility for turnkey electromechanical assembly, prototyping and short-run production

Anaheim, California – December 9, 2010 – California Chassis (Cal Chassis), a global manufacturer of telecommunications and network operations center racks, enclosures, and cabinets, today announced it has expanded its contract manufacturing and engineering services. In a move to better serve and augment customers' manufacturing needs, Cal Chassis has started offering customers its expert electromechanical assembly, prototyping, 3D modeling, short-run production capabilities, and more.

Understanding industries' evolving production dynamics and policy objectives, Cal Chassis identified a significant need to help customers accelerate time to market and, often, reduce costs of product development by expanding its production facilities and providing its military-grade engineering services to complement and enhance customers' existing manufacturing capabilities. "Since 1947, Cal Chassis has long been known as an innovative manufacturer, providing engineering, custom sheet metal fabrication, wire harnesses, and electromechanical assembly products and services in critical industries, such as Military, Aerospace, Transportation, Homeland Security, and Telecommunications," said Cal Chassis Vice President of Sales William Doyle. "This expansion provides customers with a turnkey virtual manufacturing arm, further solidifying our commitment to providing value-added products and services."

Cal Chassis' contract manufacturing and engineering services program includes a facilities expansion that complies with industry and government manufacturing and security standards for state-of-the-art electromechanical assembly and manufacturing. Standards include International Traffic in Arms Regulations (ITAR), and AS9100 B (AS9100 C pending) certifications. It also addresses customer-specific onsite inventory security measures.

About California Chassis

California Chassis is a fully-integrated ISO-9001:2000 and AS9100 B-qualified manufacturer, encompassing engineering, custom sheet metal fabrication, NEMA enclosures, 19-inch racks, wire harnesses, and an electromechanical assembly shop. Originally founded in 1947 with a mission to provide superior products, quality performance, and total customer satisfaction, California Chassis sets the standard for precision metal fabrication. California Chassis provides innovative solutions capable of meeting the dynamic requirements of our diverse and expanding clientele.
